

IILM UNIVERSITY, GREATER NOIDA

INTERNSHIP REPORT PRESENTATION

Python Development

Virtual Internship

upSkill Campus | Industry Partner: UniConverge Technologies Pvt. Ltd.

Harsh

Roll No. 25scs1003002320 | B.Tech CSE

July – August 2026

Harsh

B.Tech – Computer Science & Engineering

ABOUT THE STUDENT

Candidate Profile

Roll Number

25scs1003002320

Institute

IILM University, Greater Noida, U.P.

Programme

B.Tech CSE, Batch 2025–2029

Internship Domain

Python Development

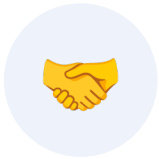

Duration

4–6 Weeks | July – August 2026

ABOUT THE PROGRAM

upSkill Campus & UniConverge Technologies

upSkill Campus is an online internship and skilling platform that partners with industry organizations to provide students with structured, hands-on experience. For the Python Development track, upSkill Campus collaborated with its industry partner, UniConverge Technologies Pvt. Ltd., Noida, to deliver a remote internship centered on practical, project-based Python automation.

Industry Partnership

Delivered with industry partner UniConverge Technologies Pvt. Ltd., Noida.

Remote Internship

4–6 week remote internship, 10:00 AM – 6:00 PM working hours.

Project-Based Learning

Hands-on Python automation project: the Smart File Organizer.

PROBLEM STATEMENT

Automating Everyday File Organization

Files that accumulate in a folder — documents, images, videos, audio, archives — are tedious and error-prone to sort manually, with a real risk of overwriting files that share the same name. This internship addressed that gap by building a Python-based automation tool that scans, classifies, and safely organizes files while reporting on the outcome.

This internship addressed that gap — practically building the full workflow:

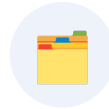

What the Internship Set Out to Achieve

File Categorization

Scan directories and classify files into categories based on file extension.

Folder Automation

Automatically create category folders such as Documents, Images, Videos, Audio, Archives.

Duplicate Handling

Safely rename duplicate files so existing files are never overwritten.

Error Handling

Manage file-access and permission errors without stopping the process.

Summary & Logging

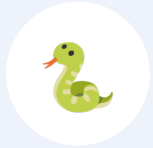

Report organized-file counts and log successful and skipped operations.

User Interface

Build a simple, menu-based interface for selecting the target directory.

The Toolkit Behind the Internship

Python

Core programming language

os & shutil

Directory & file operations

pathlib

Object-oriented file paths

logging

Operation logging

Duplicate Handling

Safe rename logic

Exception Handling

Robust error management

Menu Interface

Simple CLI interaction

Git & GitHub

Version control & hosting

From Raw Files to an Organized Directory

Scanning Layer

Scans the selected directory and identifies all files present

Categorization Layer

Maps file extensions to categories (Documents, Images, Videos, etc.)

Folder Management Layer

Automatically creates category folders as required

Duplicate-Handling Layer

Renames duplicate files so existing files are never overwritten

Error-Handling Layer

Manages file-access & permission exceptions without halting

Reporting & Interface Layer

Summary statistics, operation logs, and a menu-based interface

The Week-by-Week Development Journey

1

WEEK

Project Planning & File Scanning

Prepared the initial project plan and built the basic file-scanning module.

2

WEEK

Categorization & Duplicate Handling

Implemented categorization, folder creation, and safe duplicate-file handling.

3

WEEK

Summary Statistics & Reliability

Added summary statistics, improved error handling, and expanded testing.

4

WEEK

Interface, Logging & Docs

Built a menu interface, added logging, optimized code, started documentation.

Final

WEEK

Testimonial & Submission

Completed the project, published to GitHub, prepared the final testimonial.

EXPECTED OUTCOMES

Skills & Capabilities Gained

- ✓ Practical experience in Python file & directory handling using os, shutil, and pathlib
- ✓ Ability to design and implement a rule-based file-categorization system
- ✓ Skill in safely handling duplicate files without overwriting existing data
- ✓ Understanding of exception handling for file-access and permission errors
- ✓ Experience implementing logging and summary reporting in a Python application
- ✓ A completed, documented project published to a public GitHub repository

Internship Offer & Project Proof

Internship Role

Python Intern

Organization

upSkill Campus & UniConverge Technologies Pvt. Ltd.

Start Date

15 July 2026

Duration

4-6 Weeks | Remote

GitHub Repository

github.com/harsh25scs1003002320-lab/upskillcampus

Offer letter signed by Ms. Prabha Singh, HR Manager, retained as supporting proof of the internship. The Internship Report includes the complete offer letter and GitHub project link.

Thank You
